Effects of the perception of human rights violations and protests in Iran on islamophobic attitudes towards muslims in Germany

Peter Wetzels¹ & Thomas Richter²

¹Institute of Criminology at the Faculty of Law, Universität Hamburg (UHH),
²German Institute for Global and Area Studies (GIGA), Hamburg

Paper presented at the Migration Conference, 23 August 2023, University of Hamburg
Research Questions:

Effects of international political developments outside Germany on prevalence of political extremist attitudes, xenophobia, antisemitism, and islamophobia in Germany

Method:

Regularly repeated online surveys of persons aged 18yrs and older living in Germany

Quota-Sample (n= ca. 2.500) based on Online-Access-Panel (Germany: 300.000)

Cross-Sectional Trenddesign (six surveys per year)

• Study 1: November 2022 (n = 2429)
• Study 2: February 2023 (n = 2428)
Iran, September 16th 2022: Mahsa Amini died in Police Custody in Teheran

Amini, 22, reportedly beaten by morality police in Tehran for not complying with hijab regulations

Results Study 1: Prevalence of islamophobia by subjective evaluations

- **Positive evaluation of the incidents in Iran**
  - Yes: 35.8%
  - No: 23.4%
  - Total: 58.6%

- **Negative evaluation of the incidents in Iran**
  - Yes: 54.7%
  - No: 23.4%
  - Total: 58.6%
Results Study 1: Overlap of positive and negative Evaluations

Overlap of positive and negative Evaluations of incidents in Iran

- Agreement with positive and negative Evaluation: 43.6%
- Agreement with positive Evaluation only: 30.5%
- Agreement with negative Evaluation only: 15.3%
- Disagreement with positive and negative Evaluation: 10.6%

Percent Islamophobic Attitudes by Overlap of positive and negative Evaluations

Evaluation of the incidents in Iran

- Neither positive nor negative: 40.3%
- Only negative: 70.8%
- Only positive: 17.5%
- Positive and negative: 48.8%
A negative evaluation of human rights violations committed by State Authorities of the Islamic Republic of Iran as indicating inhumanity and antidemocratic character of Islam in general is associated with higher islamophobia among people in Germany.

The interpretation of these incidents in Iran as muslims fight for human rights and democracy is associated with lower islamophobia among people in Germany.

These effects remain in multivariate regression analyses controlling for age, gender, education, migration background, place of living (East/West Germany and religious affiliation).

However, these are results of a crossectional correlational study.

Therefore it remains unclear, whether the perception of what has happened in Iran has causal effects on islamophobia among people in Germany.

To analyse potential causal effects of these incidents in Iran, experimental research is needed.
Study 2: Survey Experiment on Effects of Incidents in Iran

- Time of Survey: February 2023
- Sample: n = 2,428
  - age: mean=45.8 (sd=14.7)
  - sex: male = 48.7%
  - education: high = 35.4%
**Study 2: Hypotheses**

**H 1:** Confrontations with descriptions of human rights violations and violence committed by state authorities of the Islamic Republic of Iran against protesters cause a significant increase in negative attitudes towards muslims in Germany.

**H 2:** Effects of confrontations with human rights violations and violence committed by state authorities of the Islamic Republic of Iran on islamophobia in Germany are dependent on the specific subjective evaluation of this incidences in Iran. (Moderatoreffect)

**H 2 a:** If Incidents in Iran are interpreted as muslims fight for freedom and democracy (positive evaluation) there will be no increase of Islamophilia.

**H 2 b:** If the Incidences in Iran are interpreted as proof of general inhumanity and antidemocratic character of Islam (negative evaluation) there will be a significant increase of Islamophobia.
A few weeks ago in the Islamic Republic of Iran, a young woman came to death after she had been arrested by the morality police for wearing non-Islamic clothing. In reaction to that demonstrations and protests erupted in Iran. The Iranian authorities responded with massive violence and death sentences.

Hypothesis 1 could be confirmed.

Confrontations with human rights violations and violence against protesters committed by the State Authorities of the Islamic Republic of Iran cause a statistical significant higher prevalence of islamophobia among people in Germany.

Hypothesis 2 is confirmed:

The degree and the direction of effects of confrontations with human rights violations and violence against protesters committed by State Authorities of the Islamic Republic of Iran on islamophobia among people in Germany are dependent on the subjective evaluations of these incidents.

- Negative evaluations are associated with increases of islamophobia
- Positive evaluations are not associated with increases of islamophobia

However: Positive Evaluations do not reduce islamophobia compared to people not confronted with the incidents in Iran.
